Be More Connected

SCG: Delivering connectivity across your business

With depots operating 24/7 and trucks always out on the road, you literally cannot afford interrupted service and the penalties which come with failing to make a delivery. As specialists in providing connectivity to your front door and across your depots, we understand it's criticality and the challenges involved.

Resilient connectivity

We provide the uninterrupted connectivity you need at a depot level and into your Cloud-based business applications. Features such as bandwidth control and disaster recovery ensure that whatever happens, your pick lists are still available.

Effective wireless distribution

As barcode scanning becomes more prevalent, there is an even greater need for robust and reliable WiFi. Our knowledge enables us to supply a bespoke solution which overcomes obstacles such as large warehouses with metal stacking, and even the challenge of secure handoff to the barcode warehouse.

Robust cybersecurity

Cybercriminals have both the motive and the means to cripple your business. We ensure you are safe from ransomware and other online threats, whilst also accounting for the human element of security comprising both deliberate action and accidental compromise.

Remote mobile service integration

Tracking the location and movement of your wagons and trucks is crucial for efficiency, safety and even reducing fuel costs. We tie remote connectivity from your vehicles into a single pane of glass for an intuitive, holistic view.

Ensure your connectivity can't let you and your customers down - we deliver reliable connectivity across your business so you can deliver when and where you need to.
