

# SCG: Protecting your production line

Every manufacturer faces unique challenges, but none can afford connectivity issues bringing production to a halt. We deliver on every aspect, from prioritising access to line of business applications such as NetSuite and Sage, to wireless access across the factory floor, and robust hosted telephony.

## Business-enabling infrastructure

IT infrastructure is now as crucial to business as any other utility, such as electricity, and should come with the same level of expectation that it will 'just work'. Bandwidth prioritisation is an essential part of this, de-prioritising non-essential use.

## Resilient connectivity

Uninterrupted service extending to Cloud applications and handoff to third parties. Our support is 24/7 to match your production schedule, and a proactive stance means we take remedial action before you even call us.

## Bolstered cybersecurity

Our approach is built around safeguarding sensitive data linked to your production process. Our Zero Trust strategy means that we both protect the network perimeter, and monitor the behaviour of network users within it.

## A dedicated partner

We take the time to understand the nuances of your manufacturing operation. Whether multiple site interactions, bandwidth or latency sensitive functions, or differing requirements for back office and factory floor staff, you can rely on our solution, freeing you to focus purely on production.
