# SCG

Be More Connected

SCG: Keeping the tills ringing

With both EPOS and ERP systems requiring a network connection, you cannot afford interrupted service and the impact it will have on customer experience. As a one-stop shop for all your connectivity needs, we understand the criticality of operating your tills, processing orders and running stock control, and the infrastructure challenges involved.

Resilient connectivity

We provide the uninterrupted connectivity you need through a combination of wired and wireless options, diverse routing and multiple carriers. Features such as bandwidth control and disaster recovery ensure that whatever happens, your EPOS and ERP systems keep on running.

Robust cybersecurity

Transactional and personal data is a prime target for cybercriminals. Our next generation cybersecurity gives you peace of mind for both local and remote users, alongside secure VPN supply chain access, GDPR compliance, ISO 27001 certification and full reporting features.

Effective wireless distribution

We ensure you have wireless coverage across your whole site, with content filtering providing an additional layer of control. Leverage powerful marketing data with user options including splash screens and terms and conditions acceptance.

Enterprise grade telephony

Company-wide telephony is essential for efficiency and productivity. Our solution incorporates unified communications to include mobile use, full reporting through a single pane of glass, the ability to use one number for all staff, and tracking for marketing campaigns.

With SCG managing your entire infrastructure, you can concentrate on transformative IT projects to develop your business, safe in the knowledge that your network will just work.

Contact us today to ensure your tills can keep ringing.
